PROFESSIONAL SUMMARY

Backend engineer with 8+ years building production systems across fintech, SaaS, and AI platform work. Experienced in Go microservices for digital banking, PHP/Laravel product platforms, and practical AI tooling including MCP for internal operational systems. Strong on APIs, SQL, Redis, concurrency problems, CI/CD, and mentoring. Looking for senior backend or full stack roles in Australia or New Zealand.

TECHNICAL SKILLS

Backend: Microservices, REST APIs, high concurrency systems, message queues, SSO/Identity

Languages: Go (Golang), PHP, Python, JavaScript/TypeScript (ramping), SQL

Frameworks: Laravel, FastAPI, Vue.js, Livewire, Next.js; React familiarity (ramping)

Data: PostgreSQL, MySQL, Redis

Cloud and infra: AWS (SQS, EC2, RDS), GCP, Kubernetes, Docker, CI/CD

AI tooling: MCP (custom ops portal + existing market servers), agent guardrails, RAG/pgvector exposure

Practices: Agile/Scrum, automated testing, code review, production debugging, mentorship

PROFESSIONAL EXPERIENCE

AI Platform Engineer | YTL AI Labs Sdn Bhd

Jul 2026 to Present | Kuala Lumpur

- Built MCP for the internal operational portal so teammates can pull data and run approved actions through an agent instead of only using the UI.
- Wired existing market MCP servers into day to day workflows (credentials based) for tools such as Datadog, Grafana, GitHub, and cloud systems.
- Designed guardrails for agent workflows beyond simple permission checks, including behavioural boundaries for safer production use.
- Cut heavy platform query runtimes from around 2 minutes to under 10 seconds.
- Migrated a 20 million row table with zero external downtime.

Senior Software Engineer, Backend | GXBank

Jan 2026 to Jul 2026 | Kuala Lumpur

- Built and maintained high concurrency backend microservices in Go for digital banking services designed for high availability and high volume financial traffic.
- Resolved a critical race condition in the onboarding flow using Redis based mutex locking.
- Optimized Redis hash slot distribution to reduce hotspotting as traffic grew.
- Delivered backend changes with banking grade testing and deployment discipline alongside cross functional squads.

Senior Software Developer | Skribble Lab Sdn Bhd

Sep 2023 to Jan 2026 | Malaysia

- Promoted to Lead Developer for Skribble Learn. Owned solution architecture, infrastructure planning, and mentorship for a team of 5 to 6.
- Shipped the Skribble Learn platform within about 12 months, with major gains in processing speed and usability versus legacy systems.
- Built CI/CD from scratch and pushed a testing culture (PHPUnit, high coverage targets) to support safer releases.
- Helped establish the company's first in house product revenue stream and secured early enterprise clients.
- Filled BA gaps: stakeholder management, Jira planning, and primary technical consulting.

Senior Full Stack Developer | qBayar Sdn Bhd

Apr 2021 to Sep 2023 | Malaysia

- Built a centralised Identity Server (SSO) and auth package, including QR based login across products.
- Led legacy migration from Yii1/Zend to Laravel, improving release speed and reducing technical debt.
- Created a reusable API wrapper package that cut third party integration time for the team.
- Lead programmer on a School Management System; reduced client reported issues from daily to weekly.

Full Stack Developer | qBayar Sdn Bhd

Nov 2018 to Sep 2020 | Malaysia

- Led RHB Host to Host payment gateway integration and related finance automation workflows.
- Built petty cash claims with RHB payouts and led purchase/inventory tracking systems.

Contract Backend Engineer | Transaction systems for a former employer

Contract | Remote

- Backend work for a former employer on systems involving race conditions, locking, workflows, and money movement.
- Deepened experience with correctness under concurrent updates where financial state must stay consistent.

SELECTED PROJECTS

rag-playground (rag-playground.lucascodes.dev): RAG pipeline with pgvector and Gemini.

InletDB: macOS database client for Postgres and SQLite, built in Rust and Tauri, with safe mode and read-only MCP.

claude-usage-mod (github.com/lucassimzq/claude-usage-mod): Claude Code plugin that keeps usage limits in view.

EDUCATION

Bachelor of Computer Science, UOWM KDU University College (2021)

Diploma in Computer Studies, KDU University College (2019)

WORK AUTHORISATION

Malaysian citizen. Require employer sponsorship to work in Australia or New Zealand. Open to relocate.
